Research Summary

Offshore AUV (Autonomous Underwater Vehicle) refers to a type of unmanned robotic vehicle designed for autonomous exploration and data collection in the ocean or offshore environments. Unlike remotely operated vehicles (ROVs) that are controlled by human operators, AUVs operate independently, pre-programmed with instructions for their missions. Offshore AUVs are equipped with various sensors, cameras, and scientific instruments to gather data on underwater topography, marine ecosystems, water quality, and other oceanographic parameters. They navigate through the water using onboard propulsion systems and advanced algorithms, allowing them to survey large areas and reach depths that are not easily accessible to humans. Offshore AUVs play a significant role in offshore industries such as oil and gas exploration, marine research, underwater archaeology, and environmental monitoring. They provide a cost-effective and efficient means to collect data and perform underwater tasks, reducing risks to human divers and enabling access to remote or hazardous underwater locations.

The major global manufacturers of Offshore AUV include Kongsberg Maritime,

OceanServer Technology, Teledyne Gavia, Bluefin Robotics, Atlas Elektronik, ISE Ltd, JAMSTEC, SAAB Group, ECA SA, Falmouth Scientific, Tianjin Sublue, etc. The global players competition landscape in this report is divided into three tiers.
