Research Summary

An offshore wind power jacket is a type of substructure used to support wind turbines installed in deeper waters, typically between 30 to 60 meters, where traditional monopile foundations are less effective. Constructed from welded tubular steel in a lattice framework resembling a jacket or truss tower, this structure offers high strength, stability, and resistance to harsh marine conditions such as strong currents and waves. The jacket is anchored to the seabed using piles driven deep into the ocean floor, providing a robust base for the turbine tower and nacelle. Its modular design allows for efficient transportation and assembly, making it a preferred choice for large-scale offshore wind farms aiming to harness stable and strong wind resources farther from shore.

The major global manufacturers of Offshore Wind Power Jacket include Lamprell, Shanghai Taisheng Wind Power Equipment, Windar Renovables, Titan Wind Energy, Sing Da Marine Structure Corporation, Dajin Heavy Industry, CIMC, SK oceanplant, CS WIND Offshore, Harland & Wolff, HONGHUA, CITIC HIC, CWHI, HSG Sungdong
