Research Summary

Oil for printing inks is a key ingredient used in the formulation of inks for various printing processes, such as offset, gravure, and flexographic printing. These oils, typically derived from vegetable or mineral sources, serve as solvents or carriers for the pigment and other additives, allowing the ink to flow smoothly and adhere to printing surfaces like paper, plastic, or metal. The oil in printing inks plays a crucial role in controlling the ink's viscosity, drying time, and overall print quality. Vegetable oils, such as soybean oil or linseed oil, are commonly used in environmentally friendly inks due to their renewable nature, while mineral oils may be used in conventional inks. The type and composition of oil used can affect the final print's color vibrancy, durability, and resistance to fading or smudging. Oils also contribute to the ink's ability to dry, either through evaporation, absorption, or oxidation, depending on the printing process.

The major global manufacturers of Oil for Printing Inks include ExxonMobil, Sinopec, Isu Chemical, Sonneborn, Ergon, Mehta Petro Refineres, Nynas, Eastern Petroleum, Arham Petrochem, Shri Parth Petrochem, Gandhar, APAR Industries, ADM, Cargill,
