### Research Summary

Oil-immersed transformers, also known as liquid-filled transformers, are electrical transformers that use oil as a coolant and insulating medium. These transformers are typically filled with mineral oil or less frequently, with synthetic oil. The oil serves multiple purposes, including cooling the transformer, providing insulation between the windings and core, and preventing the formation of air bubbles or voids that may lead to electrical discharges. The oil-immersed transformers are generally preferred for higher voltage applications due to their excellent cooling properties and higher power ratings. On the other hand, dry-type transformers are transformer units that do not use any liquid as an insulating or cooling medium. They have insulated windings and core that are encapsulated and protected by epoxy resin or other suitable materials. Dry-type transformers are often used in applications where fire safety and environmental concerns are important, such as commercial buildings, schools, hospitals, and indoor industrial settings. They have the advantage of being maintenance-free, reducing the risk of oil leaks or spills, and eliminating the need for oil containment systems. Dry-type

transformers are also more suitable for locations where maintenance access is limited or where it is not feasible to have liquid-filled equipment.

The major global manufacturers of Oil-immersed Transformers and Dry-type Transformers include Hitachi ABB, Siemens, Schneider, TOSHIBA, China XD Electric, TBEA, Baoding Tianwei Baobian Electric, Shandong Electrical Energy&Equipment, Wujiang Transformer, Zhixin Dianqi, Sunten, QRE, Dachi, Huapeng Transformer, Jinpan Technology, Wolong, YiDEA Technology, Sojo, Creat, Hezong, Shenda, Eagle Rise, Bye, Yinhe Biomed, Sanbian Sci-Tech, etc. The global players competition landscape in this report is divided into three tiers.
