Research Summary

An oil-water separator is a device designed to separate oil and other hydrocarbon-based substances from water through a physical process known as gravity separation. It is used in various industries, including oil refineries, wastewater treatment plants, and industrial facilities, to prevent the release of oil and pollutants into the environment. The separator works by utilizing the differences in density between oil and water, allowing them to separate naturally. The contaminated water enters the separator, and as it slows down, the oil, being less dense, rises to the surface, forming a layer that can be skimmed off and collected for proper disposal. The separated water is then discharged or further treated to meet regulatory standards. Overall, oil-water separators play a crucial role in environmental protection by efficiently removing oil and preventing water pollution.

The major global manufacturers of Oil Water Separator include Clarcor, Compass Water Solutions, Parker-Hannifin, Alfa Laval, Donaldson, Andritz, GEA, Wartsila, Filtration, Containment Solutions, Recovered Energy, ZCL, WesTech Engineering,
