Research Summary

An oilfield corrosion inhibitor is a specialized chemical compound used in the oil and gas industry to prevent or minimize corrosion on metal surfaces in oilfield equipment and infrastructure. Corrosion occurs when metal surfaces come into contact with water, gases, or other corrosive substances present in oilfield operations. Corrosion can lead to equipment degradation, leaks, reduced operational efficiency, and potential safety hazards. Oilfield corrosion inhibitors work by forming a protective film on metal surfaces, acting as a barrier between the metal and corrosive substances. This film helps to inhibit or slow down the corrosion process by preventing the formation of corrosion-inducing electrochemical reactions. The selection of an appropriate corrosion inhibitor depends on factors such as the type of metal, the environment, and the particular corrosive agents present in the oilfield. Regular application of corrosion inhibitors is essential to maintain the integrity and longevity of oilfield equipment and infrastructure, ensuring safe and efficient oil and gas production.

The major global manufacturers of Oilfield Corrosion Inhibitor include Ecolab, Baker

Hughes, Veolia, Halliburton, Schlumberger, Lubrizol, Solenis, Clariant, BASF, LANXESS, ICL Advanced Additives, Lonza, Daubert Chemical, etc. The global players competition landscape in this report is divided into three tiers.
