Research Summary

OLED lighting panels are flat light-emitting surfaces that utilize OLED technology to produce and emit light. These panels consist of multiple organic layers sandwiched between two electrodes—an anode and a cathode. When an electric current flows through the organic layers, the emissive materials within them emit light. OLED lighting panels offer several advantages over traditional lighting sources. They provide uniform and diffuse illumination, creating a soft and natural light output. These panels can be designed to be thin, flexible, and even transparent, offering versatility in terms of installation and integration into various lighting applications. OLED lighting panels also have the potential for energy efficiency and long lifespans. They can be used in areas such as architectural lighting, automotive lighting, decorative lighting, and general illumination, offering unique design possibilities and contributing to energy-efficient lighting solutions. Ongoing research and development efforts focus on improving the efficiency, luminous efficacy, durability, and affordability of OLED lighting panels to enable wider adoption in the lighting industry.

The major global manufacturers of OLED Lighting Panels include LG Display, OLEDWorks, Sumitomo Chem, Kaneka, Lumiotec, First-O-Lite, Osram, Konica, NEC Lighting, etc. The global players competition landscape in this report is divided into three tiers.
