### Research Summary

Oligofructose is a type of soluble dietary fiber classified as a fructooligosaccharide (FOS), composed of short-chain fructose molecules linked together. It occurs naturally in certain plants such as chicory root, onions, and bananas. Oligofructose is commonly used as a food ingredient and functional additive due to its prebiotic properties and potential health benefits. As a prebiotic fiber, oligofructose serves as a substrate for beneficial bacteria in the gut, such as Bifidobacteria and Lactobacilli, promoting their growth and activity. This leads to improvements in gut health, including enhanced digestion, increased production of short-chain fatty acids, and modulation of the gut microbiota composition. Oligofructose is often added to a variety of food products such as yogurt, cereal bars, baked goods, and dietary supplements to boost their fiber content and provide digestive health benefits, contributing to overall well-being and digestive comfort.

The major global manufacturers of Oligofructose include Cargill, Nutrinova, Naturex, Hermes Sweeteners, Beneo, Beghin Meiji, Cosucra, Shandong Bailong Chuangyuan,
