Research Summary

Oligosaccharides are short chains of sugar molecules linked together through glycosidic bonds. They are composed of 3 to 10 monosaccharide units and can be found in various natural sources such as plants, animals, and microorganisms. Oligosaccharides play essential roles in cellular recognition, signaling, and structural support. They are involved in processes like cell adhesion, immune responses, and cell surface interactions. Oligosaccharides can also be found as components of larger molecules like glycoproteins and glycolipids, where they contribute to their function and stability. In addition to their biological significance, oligosaccharides have applications in the food industry, where they function as prebiotics to promote the growth of beneficial gut bacteria, as well as in pharmaceuticals and research as diagnostic markers or therapeutic agents. Oligosaccharide structures can be diverse and complex, giving rise to their functional versatility and importance in various biological processes.

The major global manufacturers of Oligosaccharide include FrieslandCampina, Meiji, Yakult, Beneo-Orafti, Baolingbao, Bailong, Sensus, Ingredion, Nikon Shikuhin KaKo,
