### Research Summary

Olivine powder and olivine sand are two forms of the naturally occurring mineral olivine, distinguished by their particle size and specific industrial applications. Olivine powder consists of finely ground olivine mineral, typically used in foundry applications for its high melting point and low thermal expansion properties, making it suitable for molds and cores in metal casting. It is also utilized as an abrasive in sandblasting and waterjet cutting due to its hardness and durability. Olivine sand, on the other hand, consists of larger particles of olivine mineral used primarily as a lightweight aggregate in concrete and mortar for construction purposes. It provides enhanced thermal and acoustic insulation and is also employed in soil conditioning and horticulture to improve soil fertility and plant growth. Both olivine powder and olivine sand leverage the mineral's unique properties to serve various industrial sectors, contributing to applications ranging from metal casting and construction to agriculture and water filtration.

The major global manufacturers of Olivine Powder and Olivine Sand include Sibelco, Steinsvik Olivin, Eryas, Covia (Unimin), Olivine India Group, Yucheng Refractory
