### Research Summary

Olivine is a type of mineral commonly found in igneous rocks, such as basalt and peridotite. It is a silicate mineral with a greenish color and a glassy or granular texture. Olivine is primarily composed of magnesium, iron, and silica, and it belongs to the orthosilicate mineral group. It has a high melting point and can withstand extreme heat, making it a common mineral in volcanic and mantle environments. Olivine is also a major component of the Earth's upper mantle and is believed to be an important part of the planet's geologic processes. In addition to its geological significance, olivine is valued for its gemstone variety called peridot, which is a translucent green gemstone used in jewelry. Olivine has various industrial uses, including in refractory materials, ceramics, and as a source of magnesium in the production of magnesium-based products.

The major global manufacturers of Olivine include Sibelco, Steinsvik Olivin, Eryas, Covia Corp, Yucheng Refractory Products, Olivine India Group, Thermolith SA (Vitruvit), Ore-Met, Dakduklu Minerals, Egamin, LTC Minerals, Scangrit, etc. The global players competition landscape in this report is divided into three tiers.
