Research Summary

A one-way degassing valve, also known as an air release valve or a pressure relief valve, is a small device used in packaging, particularly in coffee packaging. It is designed to allow the release of gases, such as carbon dioxide, from inside the package while preventing the entry of external air or moisture. The valve functions by allowing the gas to escape through a one-way passage while maintaining a sealed barrier against the outside environment. This is particularly important in coffee packaging, as freshly roasted coffee beans release carbon dioxide gas in the packaging. If the gas is not released, it can cause the package to bulge or potentially lead to the deterioration of the coffee's flavor and aroma. The one-way degassing valve helps maintain the quality and freshness of the packaged coffee by allowing the release of excess gas while preventing the entry of damaging external elements.

The major global manufacturers of One-Way Degassing Valve include Goglio S.p.A., Wipf, Wojin Plastic Product Factory, Syntegon, Aroma System, TricorBraun Flex, Plitek, CCL Industries, etc. The global players competition landscape in this report is divided
