Research Summary

An ophthalmic capsular tension ring (CTR) is a small, flexible, and circular device used in ophthalmic surgery, particularly during cataract surgery and other procedures involving the eye's crystalline lens and its surrounding capsule. The CTR is typically made of biocompatible materials such as polymethyl methacrylate (PMMA) or silicone. Its primary purpose is to provide support to the eye's capsular bag, which holds the natural lens or an intraocular lens (IOL). By stabilizing the capsular bag, CTRs help prevent complications such as capsular contraction syndrome or posterior capsule opacification (PCO), which can cause visual disturbances after cataract surgery. These devices are often used in conjunction with other ophthalmic instruments and intraocular lenses to ensure that the lens remains properly positioned and that patients achieve improved postoperative visual outcomes. Ophthalmic capsular tension rings are valuable tools in modern cataract and lens surgery, contributing to better surgical results and patient satisfaction.

The major global manufacturers of Ophthalmic Capsular Tension Ring include Johnson & Johnson Vision, Biotech visioncare, Ophtec, Excel Optics, Eyekon Medical, Eyebright, FCI Ophthalmics, Morcher GmbH, Alyko Medical, etc. The global players competition landscape in this report is divided into three tiers.
