Research Summary

Optical design software is specialized computer software used by optical engineers, physicists, and researchers to design, analyze, and optimize optical systems and components. These software tools facilitate the creation of optical systems, such as lenses, mirrors, and imaging systems, by allowing users to model and simulate how light interacts with these components. Optical design software can perform tasks like ray tracing, which helps in predicting how light rays will behave within a system, optimizing the design for desired outcomes such as image quality, focal length, or aberration correction. It also aids in tolerance analysis, providing insights into how variations in manufacturing processes can affect system performance. These software tools are invaluable in a wide range of industries, including optics, astronomy, photography, and the development of optical devices, enabling engineers and scientists to design and refine optical systems with precision and efficiency.

The major global suppliers of Optical Design Software include Synopsys, Lambda Research Corporation, ZEMAX, ANSYS, LIGHTMACHINERY, LTI Optics, ZEISS
