Research Summary

Optical Fiber Composite Phase Line (OPPC) is an innovative technology used in electrical power transmission systems to enhance the efficiency and monitoring capabilities of high-voltage transmission lines. It combines traditional power conductor cables with optical fibers integrated into their structure. OPPC not only carries the electrical current but also provides a means for high-speed data transmission. The embedded optical fibers enable utilities to monitor the grid, detect faults, and improve the reliability and safety of the electrical network by enabling real-time communication and data transfer for diagnostics and control. OPPC has become a valuable component in modern electrical infrastructure, offering dual functionality by serving both power transmission and data communication needs, contributing to the overall resilience and intelligence of the power grid.

The major global manufacturers of Optical Fiber Composite Phase Line (OPPC) include ZTT, Fujikura, NKT Cables, Tongguang Cable, Shenzhen SDG, Furukawa, LS Cable &
