### Research Summary

An optical fiber patch cord, also known as a fiber optic patch cable or jumper, is a length of optical fiber cable terminated with connectors at both ends. These cables are used to establish optical connections between various optical devices, such as transceivers, switches, and routers, in data networking and telecommunications systems. Optical fiber patch cords are available in various types, including single-mode and multimode, and with different connector types like LC, SC, and ST. They play a critical role in ensuring the efficient and reliable transmission of optical signals within fiber-optic networks by providing flexible, high-quality interconnections that help maintain signal integrity and minimize signal loss.
