Research Summary

An optical fiber preform is a specially designed, cylindrical glass or silica rod used as the initial material in the manufacturing process of optical fibers. It serves as the foundation for creating optical fibers with precise dimensions and optical properties. The preform typically consists of a core and cladding material, where the core has a higher refractive index than the cladding. During the fiber manufacturing process, the preform is heated and stretched, drawing it into a thin, flexible, and highly transparent optical fiber. This transformation allows for the transmission of light signals over long distances with minimal signal loss and is fundamental in various telecommunications, data transmission, and optical communication applications.

The major global manufacturers of Optical Fiber Preform include Corning, Prysmian, Shin-Etsu, Furukawa Electric, Sumitomo Electric, Hengtong Optic-electric, OFS Fitel, Fujikura, Fasten Group, Rosendahl Nextrom, TKH Group, Fiberhome, YOFC, Zhongtian Technology, Futong Showa Optical Communication, WEINERT Industries AG, Yangtze Optical Electronic Co., Ltd, etc. The global players competition landscape in this report
