Research Summary

An optical splitter, also known as a fiber optic splitter or beam splitter, is a passive optical component used to divide an incoming optical signal into multiple output signals. It works on the principle of splitting or dividing the incoming light power, allowing it to be directed to multiple optical paths or devices. Optical splitters are commonly used in fiber optic communication networks to distribute optical signals to different locations or devices, such as in fiber-to-the-home (FTTH) applications. These splitters are available in various configurations, including 1x2, 1x4, 1x8, and more, indicating the number of output ports. Optical splitters are crucial for expanding and sharing optical signals within a network while maintaining signal integrity and minimal signal loss, making them essential components in optical communication systems.

The major global manufacturers of Optical Splitter include NTT Electronics, Senko, Wooriro, FOCI, PPI, Browave, NEXANS, Enablence, Kitanihon, LEONI, Korea Optron Corp, Rosenberger, Broadex, Tianyisc, Aofiber, Fiber Home, Sunseagroup, Honghui, Yilut, Gigalight, Sindi, etc. The global players competition landscape in this report is
