Research Summary

An optocoupler, also known as an optoisolator, is an electronic component designed to transmit electrical signals between two isolated circuits using light as the intermediary. It typically consists of a light-emitting diode (LED) in the input circuit and a photosensitive transistor or photodetector in the output circuit, separated by a transparent or translucent isolating barrier. When an electrical signal is applied to the input circuit, the LED emits light, which is then detected by the photodetector in the output circuit, resulting in electrical signals being transmitted without direct electrical contact. Optocouplers are commonly used to provide electrical isolation and protect sensitive components, such as microcontrollers and integrated circuits, from voltage spikes, noise, or interference originating in other parts of a circuit, making them essential for enhancing the safety, reliability, and performance of electronic systems in various applications, including power electronics, industrial control systems, and telecommunications.

The major global manufacturers of Optocoupler include onsemi, Broadcom, LITEON,

Everlight Electronics, Renesas, Toshiba, Sharp, Vishay Intertechnology, ISOCOM, NTE Electronics, Xiamen Hualian Electronics, IXYS Corporation, Standex Electronics, Kento Electronic, NingBo Qunxin Microelectronics, Panasonic, Cosmo Electronics, Shenzhen Orient Technology, Fujian Lightning Optoelectronic, Changzhou Galaxy Century Microelectronics, etc. The global players competition landscape in this report is divided into three tiers.
