### Research Summary

Oral fluid collection devices are specialized tools used to collect saliva or oral fluids for various diagnostic and testing purposes. These devices are designed to efficiently and non-invasively gather samples of oral fluids, which can contain valuable biomarkers, including hormones, drugs, antibodies, and DNA. They are commonly used in healthcare settings for conducting tests such as drug screening, hormone level measurement, infectious disease detection, and genetic testing. Oral fluid collection offers advantages over traditional blood or urine sampling, as it is less invasive, can be performed easily by the patient or a healthcare provider, and reduces the risk of needlestick injuries.
