### Research Summary

Organic pigments are a class of colored compounds derived from carbon-based molecules that are used to impart color to various materials, including paints, inks, plastics, and textiles. Unlike inorganic pigments, which are often mineral-based, organic pigments are synthesized from organic compounds and exhibit a wide range of colors and shades. They are known for their vibrant and long-lasting color properties. Organic pigments offer versatility in coloration, and their properties can be finely tuned, making them a popular choice in the production of vibrant and durable colorants for a variety of applications.
