Research Summary

Oriented Strand Board (OSB) subflooring is a popular choice in construction for creating a sturdy and stable foundation for flooring materials. It is made by compressing and bonding small wood strands with adhesives under high pressure and heat, resulting in a durable and cost-effective panel. OSB subflooring is commonly used in residential and commercial construction to provide a smooth, level, and dimensionally stable surface on which finished flooring materials, such as hardwood, laminate, or tile, can be installed. Its engineered structure and resistance to moisture make OSB subflooring a reliable choice for ensuring the longevity and integrity of the overall flooring system in a building.
