Research Summary

Orthodontic archwire, often referred to simply as an "archwire," is a vital component in orthodontic treatment. These wires are typically made from various materials, such as stainless steel, nickel-titanium, or beta-titanium, and they play a key role in aligning and repositioning teeth in orthodontic procedures. The orthodontist carefully selects and bends the archwire to create the desired force and pressure needed to move the patient's teeth into their correct positions over time. As the treatment progresses, different archwires may be used to accommodate the changing alignment of the teeth. Archwires are an essential element of braces, working in conjunction with brackets and other orthodontic hardware to gradually shift teeth, correct misalignments, and create a straighter and more functional smile.

The major global manufacturers of Orthodontic Archwire include Ormco, 3M Company, Dentsply, Henry Schien, American Orthodontics, G&H Orthodontics, TP Orthodontics, ACME Monaco, Rocky Mountain Orthodontics, GC Orthodontics, Patterson, Ultimate Wireforms, Forestadent, Dentaurum, etc. The global players competition landscape in
