Research Summary

Outsourced Semiconductor Assembly and Test (OSAT) refers to the practice of contracting the assembly, packaging, and testing of semiconductor components and integrated circuits to specialized third-party service providers. Semiconductor companies, especially integrated circuit manufacturers, rely on OSAT providers to handle the crucial post-manufacturing stages of semiconductor production, which include packaging the silicon chips, adding interconnects, and conducting quality assurance tests. OSAT companies have the infrastructure and expertise to perform these tasks efficiently, enabling semiconductor manufacturers to focus on designing and fabricating chips while reducing their operational costs and time-to-market. OSAT plays a critical role in the semiconductor industry by ensuring that integrated circuits are properly packaged and tested to meet the performance and reliability requirements of a wide range of electronic devices and applications.
