Research Summary

Overhead catenary, often referred to as overhead lines or OHL, is a system of electrification used in various forms of transportation, including trains, trams, and trolleybuses. It consists of a network of overhead wires, typically made of copper or aluminum, that supply electrical power to vehicles equipped with pantographs or trolley poles. The catenary system provides a safe and efficient means of transferring electrical energy to moving vehicles, enabling electric locomotives and trams to operate without the need for onboard batteries. Overhead catenary is commonly used in urban transit systems and high-speed railways to power electric trains, reducing greenhouse gas emissions and providing a sustainable alternative to fossil fuel-powered transportation.

The major global manufacturers of Overhead Catenary include CREC, CRCC, Siemens, Engie Ineo, Cobra, Alstom, Tianjin Keyvia, Colas Rail, Kummeler+Matter, Furrer+Frey, GCF, Sanwa Tekki, Salcef Group, Bonomi, EMSPEC, etc. The global players competition landscape in this report is divided into three tiers.
