Research Summary

Overhead cranes, also known as bridge cranes or overhead traveling cranes, are industrial lifting equipment used for transporting heavy loads within a facility or manufacturing environment. They consist of a horizontal beam, known as a bridge, which runs along elevated runways. Attached to the bridge is a trolley, which can move horizontally across the bridge, and a hoist, which can be raised or lowered. Overhead cranes are typically operated by a trained operator from a control room and are employed for various tasks, including loading and unloading cargo in shipping yards, moving heavy machinery in factories, or handling materials in construction sites. These cranes offer high lifting capacity and precision, making them crucial for streamlining material handling processes and ensuring workplace safety. They come in various types, including single girder and double girder cranes, each designed for specific load capacities and operational requirements.

The major global manufacturers of Overhead Cranes include Konecranes, Anupam Industries Limited, KITO GROUP, ABUS, GH Crane & Components, Unique Industrial
