Research Summary

An oximeter is a medical device used to measure the oxygen saturation level (SpO₂) in a person's blood and to monitor their pulse rate. It typically consists of a small, non-invasive sensor that is usually attached to a person's fingertip or earlobe. The oximeter works by emitting light at two different wavelengths, which is then transmitted through the body part to a detector. Hemoglobin, the oxygen-carrying molecule in the blood, absorbs light differently depending on whether it is carrying oxygen or not. The oximeter measures the light absorption to determine the oxygen saturation level, which is expressed as a percentage. It is a valuable tool for assessing respiratory and circulatory health, especially in situations like monitoring patients with respiratory conditions, during surgery, or for athletes at high altitudes.

The major global manufacturers of Oximeter include Masimo, Medtronic, Philips, Nonin Medical, GE Healthcare, Smiths Medical, Konica Minolta, Contec Medical Systems, Heal Force Bio-Meditech, Yuyue Group, Mindray, ChoiceMMed, Konsung Medical Group, etc. The global players competition landscape in this report is divided into three tiers.
