Research Summary

Oxygen barrier pipes are a type of plastic piping used in plumbing and heating systems designed to prevent the ingress of oxygen into the system. The primary purpose of these pipes is to inhibit the corrosion of metal components, such as boiler components and radiators, by limiting the exposure to oxygen. The pipes are typically made from materials like cross-linked polyethylene (PEX) and include an oxygen-blocking layer, often made of EVOH (ethylene-vinyl alcohol copolymer), which acts as a barrier to prevent oxygen molecules from permeating through the pipe walls. This is particularly important in hydronic heating systems and potable water systems to extend the lifespan of equipment and maintain water quality by reducing the risk of rust and corrosion. Oxygen barrier pipes are commonly used in residential and commercial applications, providing increased durability and efficiency in heating and plumbing systems.

The major global manufacturers of Oxygen Barrier Pipes include Wavin, Uponor, GF Piping Systems, Rehau, Hewing, Pipelife, SharkBite, HakaGerodur, NIBCO, Plumb Fast, Pexgol, IVT, Roth Industries, KUPP, Danfoss, Aquatherm, HongYue Plastic
