Research Summary

An oxygen supply system for hospitals is a critical infrastructure designed to provide a continuous and reliable source of medical-grade oxygen for patient care within healthcare facilities. It typically consists of a centralized oxygen generation plant, oxygen storage tanks, and a network of pipelines that deliver oxygen to various points of use throughout the hospital, including patient rooms, operating theaters, and emergency departments. The system is equipped with safety measures, such as alarms and pressure regulators, to ensure consistent and safe oxygen delivery. Hospitals can produce their oxygen on-site using oxygen concentrators, or they may rely on bulk liquid oxygen deliveries from industrial suppliers.
