Research Summary

Pallet flow rack systems are a type of material handling solution used in warehouses and distribution centers for efficient and space-saving storage of palletized goods. These systems consist of inclined roller or wheel conveyor lanes that are set at a slight downward angle. Pallets are loaded at the higher end of the lane and, due to gravity, flow smoothly down to the other end. This allows for a first-in, first-out (FIFO) storage and retrieval system, ensuring that the oldest pallets are the first to be accessed. Pallet flow rack systems are particularly valuable in high-density storage environments where inventory rotation and space optimization are essential. They help streamline order picking and reduce the need for extensive forklift travel, enhancing the overall efficiency of warehouse operations.

The major global suppliers of Pallet Flow Rack Systems include stow Group (Averys), SSI SCHAEFER, UNARCO, Frazier Industrial, Mecalux, KION Group, Steel King, Nucor Warehouse Systems, Advance Storage Products, Ridg-U-Rak, Nedcon, AR Racking, Konstant, Speedrack, Dexion (Gonvarri Material Handling), Rack Builders, Nanjing
