Research Summary

Panthenol is the alcohol analog of pantothenic acid, a B-vitamin, also known as vitamin B5. Panthenol is widely used in cosmetics, skincare products, and hair care products due to its moisturizing and skin-conditioning properties. When applied topically, it is readily absorbed by the skin and hair, where it is converted into pantothenic acid, an essential nutrient for skin and hair health. Panthenol is known for its ability to help improve skin hydration, reduce inflammation, and promote wound healing. In hair care products, it can enhance moisture retention, increase hair elasticity, and add shine, making it a popular ingredient in shampoos, conditioners, and styling products. Its versatility and gentle, non-irritating nature make panthenol a common choice in the formulation of various personal care and beauty products.

The major global manufacturers of Panthenol include BASF, DSM, TRI-K Industries, Kunshan Tongde Chemical, Hangzhou Xinfu Science & Technology, Xinfu Pharmaceutical, etc. The global players competition landscape in this report is divided into three tiers.
