Research Summary

Paraldehyde is a colorless, highly flammable organic chemical compound with the formula $C_6H_{12}O_3$. It has been historically used as a sedative and anticonvulsant medication, primarily in the treatment of insomnia and seizures. Paraldehyde was once a common treatment for these conditions, but its use has significantly declined over the years due to the development of safer and more effective alternatives with fewer side effects. The compound has a pungent odor and a strong, unpleasant taste, which has made its administration challenging for patients. While its medical use has decreased, paraldehyde continues to find some application in industrial settings, including as a chemical intermediate and in the manufacture of certain chemicals.

The major global manufacturers of Paraldehyde include Lonza, Godavari, Nuote Chemical, Bojing Chemical, Zhaofeng Chemical, etc. The global players competition landscape in this report is divided into three tiers.
