Research Summary

Paraquat, also known by its chemical name N,N'-dimethyl-4,4'-bipyridinium dichloride, is a highly toxic herbicide widely used in agriculture to control and eliminate weeds and unwanted vegetation. It is known for its rapid herbicidal action, effectively killing plants upon contact by disrupting photosynthesis. Paraquat is non-selective, meaning it can damage or destroy a wide range of plant species, making it a potent and controversial herbicide. Due to its high toxicity, paraquat poses significant health and environmental risks, and exposure to it can be fatal. It is heavily regulated in many countries, and safety measures and protective equipment are essential for its handling. Paraquat has been the subject of considerable debate regarding its use and safety, with restrictions and bans in place in some regions due to concerns about its impact on human health and the environment.

The major global manufacturers of Paraquat include Nanjing Redsun, Syngenta, Shandong Luba Chemical, Hubei Sanonda, Willowood USA, Solera, Sinon Corporation, Shandong Lufeng, Kexin Biochemical, Zhejiang Yongnong, HuBei XianLong, HPM, Qiaochang Chemical, Shandong Dacheng, etc. The global players competition
