Research Summary

Partial discharge monitoring systems are advanced diagnostic tools used in the electrical and power industry to detect and analyze partial discharges (PD) within high-voltage equipment, such as transformers, cables, and switchgear. Partial discharges are localized electrical discharges that occur in insulation materials and can lead to insulation degradation and equipment failure. These monitoring systems employ sensors and data acquisition equipment to continuously measure and record partial discharge activity, allowing for early detection of potential issues and enabling maintenance personnel to take preventive actions before serious equipment damage occurs. By monitoring and analyzing partial discharges over time, these systems provide valuable insights into the condition of high-voltage assets, helping to extend their lifespan and ensure the safety and reliability of electrical power infrastructure.

The major global manufacturers of Partial Discharge Monitoring Systems include Qualitrol, Mitsubishi Electric, Eaton, OMICRON, Siemens, Megger, HVPD, LS Cable &
