### Research Summary

Patient Data Management Systems (PDMS) are comprehensive healthcare information technology solutions that are designed to efficiently and securely collect, store, manage, and organize patient-related data and information within a healthcare facility. PDMS is typically employed in hospitals, clinics, and other healthcare settings to streamline the electronic capture and management of patient records, clinical data, and medical documentation, such as vital signs, laboratory results, medication records, and treatment plans. These systems play a pivotal role in improving patient care by enabling healthcare professionals to access and update patient data in real-time, enhance clinical decision-making, reduce errors, and ensure compliance with medical standards and regulations. PDMS also supports data analysis, reporting, and interoperability with other healthcare systems, fostering a more efficient and accurate healthcare ecosystem.
