Research Summary

PCB cutting tools, often referred to as PCB depaneling or singulation tools, are specialized cutting equipment used in the printed circuit board (PCB) manufacturing process to separate individual PCBs from a larger panel or sheet. These tools are designed to make precise and clean cuts without damaging the sensitive electronic components or circuitry on the board. PCB cutting tools come in various forms, including routers, shears, laser cutters, and depaneling machines, each tailored to different PCB cutting requirements. The choice of cutting tool depends on factors such as PCB size, material, complexity, and production volume. These tools are essential in the PCB assembly process, ensuring that the finished boards are ready for installation in electronic devices and systems.
