By 2025, China's market size is expected to be Million USD, representing approximately % of the global market share.

### Research Summary

PCI-E connectors, short for Peripheral Component Interconnect Express connectors, are standardized slots on computer motherboards and expansion cards used to connect various components to the motherboard. These connectors are designed to accommodate expansion cards, such as graphics cards, network cards, storage controllers, and other peripherals, allowing them to communicate with the motherboard and the CPU. PCI-E connectors use a high-speed serial interface to transmit data between the expansion card and the motherboard, offering significantly faster data transfer rates compared to older PCI connectors. They come in different sizes, including x1, x4, x8, and x16, denoting the number of data lanes available for communication. The most common PCI-E connector is the x16 size, typically used for graphics cards to provide high-speed data transfer for demanding applications like gaming and graphic design. Additionally, PCI-E connectors may support different generations, such as PCI-E 2.0, 3.0, and 4.0, each offering increased bandwidth and performance capabilities.

The major global manufacturers of PCI-E Connectors include Amphenol, TE

Connectivity, Molex, AVX (Kyocera), CONEC, JAE Electronics, Kycon, Samtec, Twin Industries, ERNI Electronics, CJT Connectors, Wisconn Techonlogy, etc. The global players competition landscape in this report is divided into three tiers.
