Research Summary

A PD (Power Delivery) charger is a fast-charging technology that delivers higher levels of power to devices through USB Type-C connections. It allows for more efficient charging by dynamically adjusting the voltage and current based on the needs of the device, enabling faster charging speeds compared to traditional USB chargers. PD chargers are commonly used for a wide range of devices, including smartphones, laptops, tablets, and other portable electronics. They support multiple power profiles and can provide varying levels of power, typically ranging from 5 watts up to 100 watts or more, ensuring that both low-power devices and high-power devices like laptops can charge quickly and safely. This adaptability and speed make PD chargers a popular choice for modern electronic devices.
