Research Summary

Peat is a natural organic material formed from the decomposition of plant matter in waterlogged, acidic environments, such as bogs and swamps. It consists primarily of partially decomposed mosses, sedges, and other vegetation. Peat is notable for its high water content, low oxygen levels, and acidity, which slow down the decomposition process and preserve the organic material. It is used for various purposes, including as a fuel source, horticultural substrate, and soil conditioner. In gardening and horticulture, peat is often utilized in potting mixes and soil amendments due to its moisture-retaining properties and ability to improve soil structure. Additionally, peat has been historically used as a source of fuel, although concerns about its sustainability and environmental impact have led to efforts to reduce its use and seek alternative energy sources.

The major global manufacturers of Peat include Klasmann-Deilmann, Vapo, Jiffy Products, Premier Tech, Sun Gro Horticulture, Lambert, Bord na Mona, R?kyva, Coco Green, Dutch Plantin, SMS Exports, Turveruukki, etc. The global players competition landscape in this report is divided into three tiers.
