Research Summary

A Pedelec, short for ?Pedal Electric Cycle,? is a type of electric bicycle designed to provide electric assistance to the rider while pedaling. It combines traditional cycling with an electric motor that activates when the rider starts pedaling, providing varying levels of assistance depending on the model and settings. Pedelecs are equipped with sensors that detect the rider's pedaling effort and adjust the motor's power accordingly, offering a smooth and natural riding experience. They are often used for commuting, recreational cycling, and in hilly or challenging terrains, as the electric assistance makes cycling more accessible and less strenuous. In many regions, Pedelecs are subject to specific legal regulations regarding their speed, power output, and other factors, aiming to ensure safety and promote environmentally friendly transportation options.
