### Research Summary

Poly (ether-ketone-ketone) (PEKK) is a high-performance thermoplastic polymer that belongs to the polyaryletherketone (PAEK) family. It is known for its excellent combination of mechanical, thermal, and chemical properties, making it suitable for demanding applications in various industries. PEKK is derived from the reaction of bisphenol monomers with aryl halides and is characterized by a repeating unit of ether and ketone linkages. This polymer exhibits high temperature resistance, flame retardancy, and resistance to harsh chemicals. Its mechanical strength and toughness make it a preferred material for aerospace components, automotive parts, medical implants, and oil and gas industry components. PEKK is often used in additive manufacturing (3D printing) processes, enabling the production of complex and customized structures. Its versatility, stability, and performance at elevated temperatures contribute to its growing popularity in advanced engineering and manufacturing applications.

The major global manufacturers of PEKK (Poly-Ether-Ketone-Ketone) include Arkema,

Rallis, Kaisheng New Materials, OPM, Polymics, Gharda Chemicals, etc. The global players competition landscape in this report is divided into three tiers.
