### Research Summary

PEKK, or polyetherketoneketone, is a high-performance thermoplastic polymer known for its exceptional mechanical properties, chemical resistance, and thermal stability. Belonging to the polyaryletherketone (PAEK) family, PEKK is characterized by its high melting point and excellent strength-to-weight ratio, making it ideal for demanding applications in aerospace, automotive, and medical industries. Its inherent resistance to wear, radiation, and harsh chemicals, along with its ability to maintain structural integrity at elevated temperatures, allows for its use in environments where other plastics would fail. Additionally, PEKK can be processed using various techniques, including injection molding, extrusion, and 3D printing, providing versatility in manufacturing complex components with precise specifications.

The major global manufacturers of PEKK include Arkema, Rallis, Kaisheng New Materials, OPM, Polymics, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier

includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
