### Research Summary

Pellet heating stoves are a type of home heating appliance that uses compressed wood or biomass pellets as a fuel source to generate heat. These stoves are designed to efficiently burn pellets, providing a convenient and eco-friendly way to heat residential spaces. Pellet heating stoves typically have a hopper where pellets are loaded, an auger or conveyor system to feed them into the combustion chamber, and a combustion blower to ensure efficient burning. They are equipped with electronic controls to regulate temperature and air intake, offering precise and programmable heating options.
