Research Summary

PEM electrolyzer bipolar plates are essential components in proton exchange membrane (PEM) electrolyzers, which split water into hydrogen and oxygen using electricity. These plates serve as both electrical conductors and structural elements, channeling gases and cooling fluids while separating individual cells within the electrolyzer stack. Made from corrosion-resistant materials such as coated metals or conductive composites, bipolar plates play a critical role in ensuring efficient gas flow, minimizing electrical resistance, and maintaining the durability of the electrolyzer under harsh electrochemical conditions. Their design and material quality directly impact the performance, lifespan, and efficiency of hydrogen production systems.
