### Research Summary

Pentane is a volatile and flammable hydrocarbon with the chemical formula  $C_5H_{12}$ . It is a colorless and odorless liquid at room temperature and atmospheric pressure. Pentane is part of the alkane family, and its structure consists of a straight chain of five carbon atoms, each bonded to two hydrogen atoms. There are three isomers of pentane: n-pentane (normal or linear pentane), isopentane (methylbutane), and neopentane (2,2-dimethylpropane), with n-pentane being the most common and straightforward form. Pentane is widely used as a solvent in laboratories and industrial applications, particularly in the extraction and purification of various chemicals. It is also used as a fuel component in some gasoline blends, and its isomers have various applications in the chemical and petrochemical industries. While pentane is useful, its flammability and potential environmental impact have led to careful handling and regulations in its usage.

The major global manufacturers of Pentane include South Hampton Resources, Phillips 66, CNPC, Shell, Junyuan Petroleum Group, ExxonMobil Chemical, TOP Solvent, Aeropres Corporation, etc. The global players competition landscape in this report is divided into three tiers.
