Research Summary

Peptide synthesis is a chemical process used to create peptides, which are short chains of amino acids that are the building blocks of proteins. This method involves the sequential addition of amino acids to form a specific peptide sequence, which can range from just a few amino acids to longer, more complex sequences. Peptide synthesis is crucial in various scientific and medical applications, including pharmaceutical research, where it's used to develop peptide-based drugs and therapeutic compounds. There are two primary approaches to peptide synthesis: solid-phase peptide synthesis and liquid-phase peptide synthesis. In solid-phase synthesis, the growing peptide chain is attached to a solid support, while in liquid-phase synthesis, the reactions take place in solution. Peptide synthesis plays a vital role in understanding protein structure and function, drug development, and the creation of various biotechnological products.

The major global manufacturers of Peptide Synthesis include Bachem, PolyPeptide, USV Peptides, Thermofischer, GL Biochem, Hybio, Bio Basic, JPT, Genscript, Xinbang, ScinoPharm, 21st Century Bio, CPC Scientific, LifeTein, AnaSpec, New England
