### Research Summary

Perfluoroelastomer (FFKM) is a specialized type of elastomer that is uniquely suited for use in demanding applications within the oil and gas industry. FFKM exhibits exceptional resistance to high temperatures, aggressive chemicals, and extreme pressures, making it ideal for sealing and gasketing components in critical equipment such as valves, pumps, and drilling tools. Unlike traditional elastomers, FFKM materials contain a high proportion of fluorine atoms, which impart superior chemical resistance and thermal stability. This enables FFKM seals to maintain their integrity and performance even in harsh operating environments where exposure to corrosive fluids, high temperatures, and rapid pressure changes is common. As a result, FFKM seals help to minimize the risk of leaks, reduce maintenance downtime, and enhance the reliability and safety of oil and gas operations.

The major global manufacturers of Perfluoroelastomer (FFKM) for Oil and Gas include DuPont, AGC, 3M, Solvay, Trelleborg, Greene Tweed, Precision Polymer Engineering
