Research Summary

Perfluoroelastomer (FFKM) is a high-performance elastomeric material used in the semiconductor industry due to its exceptional resistance to harsh chemicals, high temperatures, and aggressive plasma environments. These elastomers are crucial in creating seals, gaskets, and components within semiconductor manufacturing equipment, ensuring airtight and chemically resistant barriers. FFKM materials prevent contamination and maintain the integrity of vacuum systems, chambers, and processing tools used in semiconductor fabrication, allowing for precise and reliable manufacturing processes in semiconductor cleanroom environments. Their robust properties make them ideal for use in etching, deposition, and other critical processes, ensuring the efficiency and reliability of semiconductor manufacturing equipment.
