### Research Summary

Perfluoroelastomer (FFKM) is a high-performance synthetic rubber-like material known for its exceptional resistance to extreme temperatures, aggressive chemicals, and various challenging environments. FFKM is a type of elastomer that is made up of carbon, fluorine, and oxygen atoms. Its unique molecular structure, with a backbone of alternating carbon and oxygen atoms, gives it outstanding chemical inertness, high thermal stability, and resistance to a wide range of chemicals, including acids, bases, solvents, and even strong oxidizers. FFKM is commonly used in applications where traditional elastomers or seals would degrade or fail, such as in the chemical, petrochemical, semiconductor, and aerospace industries. Its ability to maintain its properties in harsh conditions makes it an essential material for creating reliable seals, gaskets, O-rings, and other critical components in demanding industrial and high-tech applications.

The major global manufacturers of Perfluoroelastomer (FFKM) include DuPont, 3M, Solvay, Daikin, Asahi Glass, etc. The global players competition landscape in this report
