Research Summary

Perfluorosulfonic acid proton exchange membranes (PEMs) are advanced materials used in proton exchange membrane fuel cells (PEMFCs) and other electrochemical devices. These membranes consist of a fluoropolymer backbone with sulfonic acid groups attached. This unique chemical structure enables efficient proton conduction while maintaining excellent chemical stability and mechanical durability under harsh conditions. In PEMFCs, these membranes serve as the electrolyte, facilitating the transfer of protons between the fuel and oxidant electrodes while blocking the passage of electrons. Their high proton conductivity and low electronic conductivity contribute to the high efficiency and power density of PEMFCs. Perfluorosulfonic acid PEMs are widely regarded as one of the most promising materials for clean energy applications due to their high performance, durability, and compatibility with hydrogen and other fuels.

The major global manufacturers of Perfluorosulfonic Acid Proton Exchange Membranes include Gore, Chemours, Asahi Kasei, AGC, Dongyue Group, Solvay, Ballard, FUMATECH BWT GmbH(BWT Group), etc. The global players competition landscape in this report is divided into three tiers.
